

Chain & Bar 125

DESCRIPTION:

Cougar Chain & Bar Oil 125 is manufactured using selected Virgin Flushing Oil as the base oils; it is not made from "recycled" oil.

The base oils have been subjected to extensive drying and cleaning using our exclusive technology, "OSCAR", and when finished are drier and cleaner than any other base oils.

The base oil is then subjected to lab testing to ensure suitability, then blended with new base oils to correct the viscosity to iso125 (125cst @ 40degC) and then blended with extreme pressure, antiwear and tackifier additives in "overdose" proportions.

Cougar Chain & Bar oil 125 exceeds the performance capabilities of other iso125 Chain & bar oils and is well suited to Commercial applications.

ADVANTAGES:

- * Less wear; anti-wear additives are in "overdose" proportions
- * Less "fling off"; tackifier additive is also in "overdose" proportion reducing "fling off"
- * Cost savings due to initial manufactured cost saving, reduced wear and reduced loss due to "fling off".

Typical Specs:

Viscosity, cst @ 40 degC. 125

Colour Colour varies due to types of base stocks used

Very tacky

Available in 20, 205 and 1000 litre containers
