

# MANN-FILTER

## Product information

No. 105  
24.03.2014

### First one, now two – and savings for you

The one-piece air filter C 41 1776 is replaced by the two-piece C 41 001 KIT.

The air filter element can be easily separated from the cover and is manufactured using the latest spiral wound technology. Both of these offer the following economic benefits:

- Saves resources and thus energy
- Reduces CO<sub>2</sub>-emissions on disposal
- Weighs 2.3 kg less, more compact design
- Increases water stability
- Improves filtration performance
- Saves money

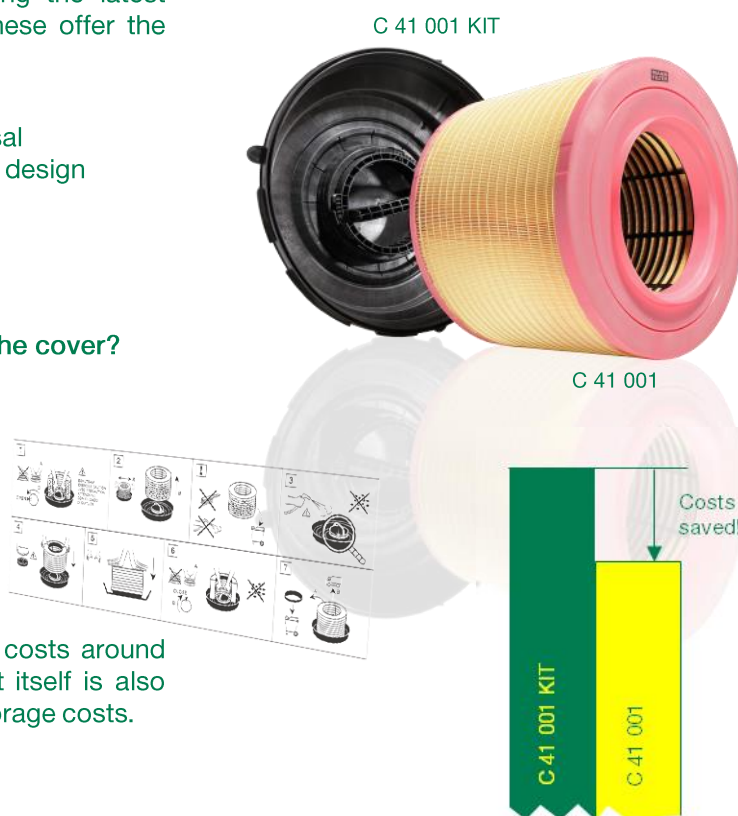

#### How do I detach the element from the cover?

The filter element is removed using a simple to handle patented turning mechanism. That's all!

Detailed instructions are printed on the box.

#### What exactly do I save?

The filter element without the cover costs around 10 % less than the kit. The element itself is also more compact, therefore reducing storage costs.

Save energy and resources

Reduce weight

Save space

Reduce costs

Improve service

Increase filtration performance

Improve water stability

Increase economy

Reduce logistic costs
